Work continues on the replacement of the State Highway 58 bridge over Ford Street in Golden, Colorado.

The original bridge was constructed in 1967 and is rated as one of Colorado’s poor bridges. In addition to the demolition of the existing bridge and construction of a new bridge, work includes retaining walls and reconstruction of portions of the eastern ramps to/from Washington. The new bridge will be approximately two feet lower than the existing bridge in order to achieve better sight distance for vehicles on SH 58. The original bridge was built higher to accommodate the trains that used to travel underneath, in the location of the current bike path. Hamilton Construction was awarded this project that will last approximately one year.

Anticipated Delays and Restrictions

- Bridge construction will continue on a consistent basis and workers will be present on the site daily during the week with Saturday work if necessary.

- Ford St. and the bikepath will continue to be detoured at various times over the next several months to allow for bridge construction and the safety of both the workers and traveling public.

- Installation of foundation piling will begin in the coming weeks which may be loud, will be performed during daytime hours. Piling installation should take 3-4 days to complete.

- Washington Ave off-ramp will remain closed until late November/early December when Phase 2 construction is anticipated to begin.

- Thank you for your patience during our important work. Remember to obey all traffic signs and flaggers and please go slow for the cone zone!

Communicating With Us
To receive updates about road conditions, construction information, or if you have questions or concerns, please send us an email at Highway58OverFordStreet@gmail.com or leave a message on the project hotline at 720.441.2174. We will respond within 24 hours.
